# Augmented Reality and Virtual Reality

17<sup>th</sup> May, 2022

In Collaboration with  
National Institute of Electronics & Information Technology (NIELIT), Chandigarh

AR uses a real-world setting while VR is completely virtual. AR users can control their presence in the real world; VR users are controlled by the system. VR requires a headset device, but AR can be accessed with a Smartphone. AR enhances both the virtual and real world while VR only enhances a fictional reality. Implementation of AR in farming will help in improving farm production. The technological wave of AR in agriculture will revolutionize farming. There will be a continuous surge in human population in future decades. Hence, the importance of Augmented Reality in agriculture also increases.
